The Cemline Snow Melt Package and Radiant Floor Heater are heat exchange packages designed to provide heat transfer between energy source (boiler water or steam) and the radiant fluid (typically a 10-40% glycol blend).

These packages are provided with a heat exchanger, controls, and accessories allowing easy installation in the radiant heat exchange system. When using boiler water as the energy source the brazed plate heat exchanger is supplied. A brazed plate heat exchanger can provide a lower approach temperature than a shell and tube heat exchanger while helping to improve the efficiency of today’s condensing boiler(s).

The radiant heat exchange system control and 3-way motorized tempering valve provides steady output temperature to the radiant heat exchange system loop in a boiler water application. A shell and tube heat exchanger is an industry standard when using steam as the energy source and is supplied with a steam application.

The radiant heat exchange system control, steam control valve and condensate traps provided delivers steady output temperature to the radiant heat exchange system loop in a steam application. Factory packaging keeps contractor installation time to a minimum; the only connections required are of boiler water or steam/condensate, radiant fluid, and electric.
Basic Boiler Water Package Includes:

- Brazed Plate Heat Exchanger
- Controller – complete with boiler water return sensor, outlet radiant sensor, return radiant sensor, and slab sensor (installed by others in field)
- 3-way motorized tempering valve (Radiant Side)
- Inlet Strainers (Boiler Water Side & Radiant Side)
- Boiler By-Pass Balancing Valve
- Ball Valves for isolation of heat exchanger
- Boiler Water Circuit Setter
- Ball Valves for isolation of heat exchanger
- Clean out ports for heat exchanger
- Steel Channel Base
- 16 Gauge Steel Frame with hammer tone enamel paint

Optional Equipment:

- Boiler Water Pump
- Radiant Side Pump
- BACNET Interface

Cemline Snow Melt Package and Radiant Floor Heater
Steam Dimensional Data

Basic Steam Package Includes:

• Shell & Tube Heat Exchanger - A.S.M.E Code Rated
• Controller – complete with outlet radiant sensor, return water sensor, and slab sensor (installed by others in field)
• Steam Control Valve
• Inlet Steam Strainer
• Main and Drip Trap
• Vacuum Breaker
• Steel Channel Base
• 16 Gauge Steel Jacket & Insulation

Optional Equipment:

• Radiant Side Pump
• BACNET Interface

Snow Melt Package and Radiant Floor Heater shall be CEMLINE factory assembled and packaged. Snow Melt Package and Radiant Floor Heater shall be constructed in accordance with A.S.M.E. Code for working pressure of 150 psig. The packaged heater shall be constructed with a carbon steel tank, with steel threaded openings, 3/4” O.D. copper tubes, steel tube sheet, and steel coil head. Heater shall be mounted on a steel support skid. Heater shall be insulated with foam in place insulation protected by an enameled metal jacket, 20 gauge minimum thickness. Heater shall be factory assembled and piped including incoming steam strainer, (air) OR (pilot) or (electronic) operated temperature regulator, main and auxiliary float and thermostatic steam traps, and condensate strainer.

Heater shall be supplied with solid-state control module with LED backlit LCD display and LED pilot lights to indicate power on-off, system output, burner on-off, slab pump on-off, alarm, valve open, and valve close. The controller shall be supplied with a slab sensor to measure temperature and the presence of precipitation. Controller shall be capable of operating a motorized valve or providing a modulating control output. Heater shall be furnished with a water pressure gauge and an A.S.M.E. pressure relief valve of sufficient size to relieve total BTU input of the coil.

Manufacturer shall assume responsibility for correct sizing of components to assure performance designated in design criteria.

Heater shall be CEMLINE Corporation Model SMP_________S.

Heater shall be mounted horizontally.

Coil to heat _____ GPM of _____ % Propylene Glycol from _____°F to _____°F with_____ psig steam to the control valve.

Snow Melt Package and Radiant Floor Heater shall be CEMLINE factory assembled and packaged. Snow Melt Package and Radiant Floor Heater shall be mounted on an enameled metal base, 16 gauge minimum thickness. Heater shall be factory assembled and piped including boiler water strainer, circuit setter, and boiler water balancing valve. Factory piping shall include a 3-way motorized tempering valve and inlet strainer on the snow melt side of the heat exchanger. Heat exchanger shall be single walled brazed copper brazed 316L stainless steel plate type.

Heater shall be supplied with solid-state control module with LED backlit LCD display and LED pilot lights to indicate power on-off, system output, burner on-off, slab pump on-off, alarm, valve open, and valve close. The controller shall be supplied with a slab sensor to measure temperature and the presence of precipitation. Controller shall be capable of operating a motorized valve or providing a modulating control output. Heater shall be furnished with a water pressure gauge and an A.S.M.E. pressure relief valve of sufficient size to relieve total BTU input of heat exchanger.

Manufacturer shall assume responsibility for correct sizing of components to assure performance designated in design criteria.

Heater shall be CEMLINE Corporation Model SMP_________S.

Unit dimensions ________" width x ________" long x ________" height.

Plate exchanger to heat _____ GPM of _____ % Propylene Glycol from _____°F to _____°F with_____ GPM of _____°F inlet _____°F outlet.
